

REVOLUTIONIZING THE POWER OF UTILITIES: PREDICTIVE AI

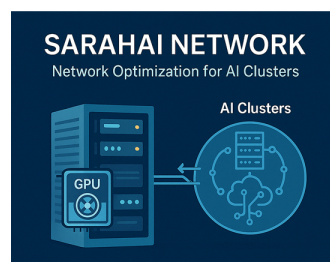

Turn static infrastructure into dynamic intelligence.

SARAHAI (Situational Awareness Response And Help AI) delivers real-time visibility, predictive analytics, and decision-ready insights that energize your utility operations from generation to grid.

AI-powered video inference using IP cameras delivers instant analysis, precise detection, and low-latency decisions—at scale.

Network optimization ensures AI clusters move massive data fast and efficiently, maximizing performance across high-bandwidth, low-latency connections.

Rolling forecasting module with automated anomaly detection instantly identifies price and load irregularities for proactive decision-making.

Advanced learning algorithms autonomously detect anomalies, control access, identify threats from video, and enable fast emergency response.

SARAHAI's predictive pattern-based architecture analyzes energy and load behaviors in real time to transform legacy utility operations into adaptive, efficient, and resilient networks—turning infrastructure into actionable intelligence for smarter forecasting, optimized performance, and reduced operational costs.

Empower your grid with foresight. Leverage SARAHAI to predict demand, prevent outages, and enhance operational efficiency. The future of energy starts with smarter decisions—start your AI transformation today. Contact Eric Frazier (408) 556-0685 or Rick Bryant (832) 752-8875 at Tensor Networks.
